

Optimizing Business Operations with Infor Fashion Cloud

case study

Business Need

The client is a global manufacturing enterprise that needed a comprehensive solution to address various operational challenges, including high inventory levels, limited forecasting capabilities, and supply chain issues. Additionally, there was a need to streamline financial period closures, reduce technical debt, and enhance manufacturing information across seas material and 3PL warehouses. The goal was to improve MIS capabilities and reduce reliance on manual reporting.

Solution

Marlabs implemented a diverse portfolio, including the Infor Fashion Cloud Suite, which was initiated across sites in the Eastern US, with rollouts in India, China, and Germany in progress. The solution involved deploying a full cloud-based Infor Fashion solution suite, integrating manufacturing processes with international suppliers and trading partners, and utilizing Infor Factory Track and Infor Accelerator-based processes. The Vertex solution was also integrated, along with EDI to streamline supplier interactions.

Outcome

- ▶ Improved inventory management and forecasting capabilities, leading to better stock control and demand planning.
- ▶ Streamlined financial period closures and optimized supply chain operations, resulting in faster reporting and more efficient logistics.
- ▶ Enhanced manufacturing information management and MIS capabilities, reducing manual reporting and improving decision-making..
